Profesional Experience

APP RESERVATIONS

Application developed in react, using axios as a query method to the delivered API, where the user can log in and make a reservation. When you are logged in, you can make or view the reservations you have made, see the budget, leave comments about each reservation or delete it if you wish. It contains independent filters so that you do not have a bad user experience.

<https://reservationsapp.onrender.com/>

APP USERCRUD

Application developed in React using the Axios library to query the API and manage promises. creating a personalized crud, in this app you can save your friends' birthdays

<https://crudusercrud.netlify.app/>

APP CLIMA

Application developed in React using the Axios library to query the API and manage promises. As functionalities we can find that the background changes according to the color and you can enter the city or country for which you want to know the weather.
